

## Let's make a better West Virginia

Breaks in coal slurry impoundments can threaten the lives and health of area residents, destroy homes and businesses and contaminate water supplies. This dangerous potential looms over coal mining regions in West Virginia and throughout Appalachia. – Senator Robert C. Byrd

Dear YOUR DELEGATE OR SENATOR

Like Senator Byrd, I am very concerned about the safety of the approximately 150 active and hundreds of abandoned toxic coal waste impoundments in West Virginia. (See the no. of impoundments in your district: [www.coalimpoundment.org](http://www.coalimpoundment.org).)

Impoundments have tragically failed in the past (Buffalo Creek, 1972; Martin County, Ky., 2000). Sludge injection and toxic spills are frequent. Please end this needless threat to my family's well being. The National Research Council study of coal waste impoundments made several recommendations, which, if implemented, would help protect coalfield residents and our communities. Safer alternatives to coal sludge impoundments exist. For the children's sake, please take the lead in creating legislation that will begin to reduce the dangers of coal sludge impoundments.
